Connecting to the LoneStar wireless network – iOS

Lone Star College is currently upgrading its wireless network. Personal devices (laptops, mobile devices) can connect to the new LoneStar network, as long as the user has an active student, faculty, or staff account. Library patrons and University Center partners may use their 14-digit library card number and PIN in order to access the network.

Devices with later Operating Systems (Windows 8, MAC OSX, iOS, Android), rarely have any issues connecting to LoneStar, and the process is relatively simple. It requires a username and a password and the device configures the rest of the settings automatically.

Below are the steps for this procedure:

Add a new wireless profile for the LoneStar wireless network by doing the following:

1. Go to Settings > Wi-Fi
2. LoneStar will appear in the list of available Wi-Fi networks.
   
   **NOTE:** You must be on campus in order for the network to appear in your list of available Wi-Fi networks.

   **NOTE:** Visitors to campus who have been given a username and password, should choose the LoneStar-Visitor network. If a visitor has not registered or been given a temporary username and password to use during their time on campus, call the OTS Service Desk at 832.813.6600 in order to register and receive login credentials.

3. Choose LoneStar and enter your Lone Star College username and password (the same you use to access myLoneStar).

   **NOTE:** Library patrons and University Center students and faculty, use your 14-digit library card number as your username and your PIN as the password.

4. You may be prompted to accept a security certificate (it will show up at not verified – disregard). Click Accept and you should be connected to the LoneStar wireless network.
