**PeopleSoft/PeopleTools 8.54 Administration Tools**

**Automated Configuration Management**
With each new release, Oracle PeopleTools provides new technology to our infrastructure, which adds rich, new features to support the functional requirements of our applications. While the new technology enhances the user experience and capabilities of our applications, the new technology often brings additional steps to the environment configuration and implementation process. This can create challenges for system administrators, development teams, and testing teams who routinely set up numerous environments that need to be refreshed on a regular basis. Oracle PeopleTools and PeopleSoft application teams share that same challenge.

**Data Management**
- PeopleSoft Data Mover, PeopleSoft Data Archive Manager, Data integrity and auditing, Diagnostics Framework and Database platform considerations.

**Performance Monitor**
The Performance Monitor enables you to view real-time and historical performance data of your PeopleSoft systems. The Performance Monitor provides the information that you need to solve immediate performance issues and analyze trends in system performance.

**Security Administration**

**System and Server Administration**
- PSADMIN, analytic servers, web servers, verify search indexes, PeopleSoft Configuration Manager, PeopleTools utilities, tracing and debugging, Jolt Internet Relay and timeout settings.
