The industrial diesel technology program at Lone Star College-North Harris has been designed by experts in the field and includes a combination of technical knowledge and hands-on skills. The curriculum covers a broad range of topics such as hydraulic systems, computer diagnostic systems, and electrical troubleshooting skills. Graduates are prepared to enter the field as field service maintenance technicians, mechanics, and managers. Students may enter the program at the beginning of any semester.

The field of diesel technology is experiencing rapid growth as construction and oil extraction technologies evolve. Diesel technology is the diagnosis, repair, and maintenance of large industrial diesel engines. Such engines may be used to power machines such as trains, large ships, electrical power generators, oilfield equipment, and heavy construction equipment.

Due to a continuing shortage of qualified technicians, job opportunities abound in the diesel technology industry. The diesel technology field is a rewarding career field with a variety of employment opportunities. If you are good with your hands and have a natural curiosity for how machines work, this field is for you.
