IRB Guidance Document:  
Student/Classroom Research Projects

Lone Star College System requires that all research involving human subjects conducted by faculty or staff affiliated with the college be reviewed and approved by the Institutional Review Board (IRB) prior to initiation, regardless of the source of funding and regardless of its federal status as an exempt, an expedited, or a full review project. Investigators may not solicit subject participation or begin data collection until they have received written approval from the IRB.

The IRB further requires that all student research activities are supervised by a faculty member; however, some types of student research activities may not require IRB review above and beyond faculty supervision. LSCS supports a wide range of research projects using human subjects -- from course-related research exercises to dissertation studies. This document is intended to clarify IRB policy and procedures as they relate to student and classroom research projects. For additional information regarding the IRB submission and review of such projects, please contact IRB Staff at IRB@lonestar.edu.

**Independent Research Projects**

Independent research projects are those that employ systematic data collection with the intent of contributing to generalizable knowledge. Theses, dissertations, and honors research projects involving human subjects that are considered research as defined by 45 CFR 46 (i.e., "a systematic investigation, including research development, testing and evaluation, designed to develop or contribute to generalizable knowledge") always require review by the IRB. Investigations designed to develop or contribute to generalizable knowledge are those that seek to draw general conclusions, inform policy, or generalize findings beyond a single individual or an internal program.

While such research is often disseminated through scholarly publication or presentation of the data, research results do not have to be published or presented to qualify the experiment or data gathering as research. The intent to contribute to "generalizable (scholarly) knowledge" makes an experiment or data collection research, regardless of publication. Honors Projects presented at Lone Star College System Honors Day are considered research because there is a possibility that they will also be presented at a later competition outside the college.

**Research Methods Training And Curriculum**

Research projects for which the overriding and primary purpose is a learning experience in the methods and procedures of research do not meet the federal definition of research and are therefore generally not required to have IRB review/approval. Curriculum projects in which students conduct research involving human subjects need not be reviewed by the IRB if all the following conditions are satisfied: (please see below for definitions of words in bold)
1. The project involves **minimal risk** to subjects (i.e., when "the risks of harm anticipated in the proposed research are not greater considering probability and magnitude, than those ordinarily encountered in daily life or during the performance of routine physical or psychological examinations or tests").

2. The project does not involve **sensitive topics or confidential information** that could place a participant at risk if disclosed.

3. The project does not involve persons from **vulnerable populations** as participants.

4. The project must involve the **voluntary participation** of individuals without any coercion or pressure being placed upon them by the researcher. Though not required, it is recommended that instructors/students consider providing a consent document to participants and fully inform them of the research they will be taking part in.

5. **The results of the project will never be distributed** outside the classroom and/or institutional setting or used for publication, although the results may be presented to instructors or peers for educational purposes or as part of a class assignment. If the possibility exists that either the instructor or the student would consider disseminating the data as generalizable knowledge, the research must be submitted for IRB review. If after collection of data the instructor or student deems the results to represent generalizable knowledge worthy of dissemination, the instructor should immediately submit a protocol describing the method and results to the IRB for review/approval. Please note that approval under such circumstances is not guaranteed and any data collected under a classroom projects exclusion may not be disseminated prior to IRB approval.

**Responsibility for Oversight of Student Projects/Classroom Activities**

Each faculty and department has the responsibility for: (1) assessing whether student projects/classroom activities involving human participants meet eligibility for review or exclusion from IRB review; (2) overseeing these activities; and (3) assuring that ethical principles are adhered to in the conduct of those activities.

Faculty working with students on research projects must be certified to conduct research with human subjects. IRB Training Certification is offered through the National Institute of Health online at [http://phrp.nihtraining.com/users/login.php](http://phrp.nihtraining.com/users/login.php).

With regard to classroom projects, faculty instructors are encouraged to become fully familiar with each student's project(s). A checklist is available (below) for assessing whether or not classroom projects meet the criteria for exclusion from IRB review. It is also important that instructors who teach research methods courses educate students regarding the existence of Human Subjects Panels and discuss the relevant ethical issues surrounding the use of human subjects in research. IRB staff is available to conduct presentations on human subjects research in your class- for further information, please contact IRB staff at [IRB@lonestar.edu](mailto:IRB@lonestar.edu).
Definitions used above

Minimal Risk - Student research projects that fit the categories below are generally considered minimal risk:

- Research conducted in an educational setting involving normal education practices, such as research that examines or compares regular and special education curriculum including but not limited to instructional strategies/techniques, curricula, or classroom management methods.
- Research involving the use of educational tests, survey procedures, and interview procedures.
- Observation of public behavior if confidentiality or anonymity is maintained.
- Research with subjects who are elected or appointed public officials or candidates for public office, regardless of whether the subjects may be identified or the information is sensitive.
- Research on individual or group characteristics or behavior in such areas as perception, cognition, motivation, identity, language, communication, cultural beliefs or practices, social behavior, etc. provided that confidentiality or anonymity is maintained.
- Research employing oral history, focus group, program evaluation, human factors evaluation, or quality assurance methodologies.
- Collection of data from voice, video, digital, or image recordings for research purposes.
- Research involving the collection or study of existing data, documents, records, pathological specimens, or diagnostic specimens, if one of the following is true: the sources are publicly available or the information is recorded by the investigator in a way that subjects cannot be directly or indirectly identified.

Sensitive Topics - Any interview, survey or questionnaire that proposes to investigate opinions, behaviors, and/or experiences regarding, but not limited to, any of the following sensitive topics requires IRB approval:

- sexual orientation, incest, rape, sexual molestation, deviant sexual behaviors or attitudes regarding sexual conduct (pedophilia, bestiality, etc.), practices of contraception, abortion and/or pregnancy, or
- substance use and/or abuse including, but not limited to, alcohol, marijuana, steroids, amphetamines, narcotics and any prescription medication legally or illegally obtained, or questions regarding mental health (e.g., suicide, depression, obsessive compulsive behaviors including, but not limited to, gambling, smoking, eating, etc.), or
- traumatic experiences of an individual, including war or combat experiences of veterans

Vulnerable Populations (for the purposes of classroom research) may include: pregnant women, fetuses, children (with the exception of observational studies), prisoners, persons at high risk of incarceration or deportation, or mentally disabled. Projects involving such subjects require IRB review and submission of a protocol for approval prior to beginning the research.
Classroom Research Project Checklist

This document is intended to assist Lone Star College System instructors in assessing whether classroom research projects may be excluded from review and approval by the LSCS Institutional Review Board (IRB). All items below must be satisfied for classroom projects to proceed outside of IRB review. For questions relating to such projects, we encourage instructors to contact IRB Staff at IRB@lonestar.edu.

- The research project is to be performed by students enrolled in a course at LSCS as a requirement for completion of the course.
- The overriding and primary purpose the project is as a learning experience in the methods and procedures of research.
- The instructor is fully aware of all aspects of the research project and will take responsibility for overseeing the project and assuring that ethical principles are adhered to in the conduct of those activities.
- There is no intent on the part of the instructor or student to produce generalizable knowledge or to disseminate the findings beyond presentation to instructors or peers in an LSCS classroom setting.
- The project involves minimal risk to subjects (i.e., when "the risks of harm anticipated in the proposed research are not greater considering probability and magnitude, than those ordinarily encountered in daily life or during the performance of routine physical or psychological examinations or tests").
- The project does not involve sensitive topics or confidential information that could place a participant at risk if disclosed.
- The project does not involve persons from vulnerable populations as participants.
- The project involves the voluntary participation of individuals without any coercion or pressure being placed upon them. The instructor/students have considered whether a consent document should be provided to participants.
