Feed Publishing Framework
The Feed Publishing Framework provides user interfaces and application programming interfaces (APIs) for feed definition creation and maintenance, feed searching and subscription, as well as feed document generation and delivery.

Integration Broker Service Operations Monitor
The Integration Broker Service Operations Monitor provides the following features: 1) Status on queues, nodes, and individual service operations. 2) You can also view and edit service operation XML. 3) Control and administration of domains that have publication and subscription (pub/sub) servers running against the current database. 4) Ability to activate or deactivate domains, recover from stalls, and so forth. 5) Workflow notification of error messages and archival of service operations. 6) Batch processes for error notification and service operation archival.

Integration Broker Testing Utilities and Tools
The Integration Testing Utilities and Tools provides Send Master utility, Simple Post utility, Integration point test automation tools, Handler Tester utility, Transformation Test utility, Schema Tester utility, Generate SOAP Template utility, Service Operation Testing utility and Provider REST Template utility.

Component Interfaces
A component interface is a set of application programming interfaces (APIs) that you can use to access and modify PeopleSoft database information programatically.

Integration Broker
PeopleSoft Integration Broker performs asynchronous and synchronous messaging among internal systems and third-party systems, exposes PeopleSoft business logic as web services to PeopleSoft and third-party systems, and consumes and invoke web services from third-party and PeopleSoft systems.

Integration Broker Administration
Integration Broker Administration performs system administration tasks in PeopleSoft Integration Broker such as:
• Set up and configure integration system components, such as messaging servers, nodes, integration gateways, listening and target connectors, and so on.
• Configure the integration system to handle services, including specifying namespaces, setting up UDDI repositories, and so on.
• Secure the integration environment by applying security at the web server, gateway, application server, node and service operation level.
• Fine tune integration system performance by employing failover, master/slave processing, load balancing, and so on.
• And more.

MultiChannel Framework
PeopleSoft MultiChannel Framework (MCF) provides the tools that are required to support multiple channels of communication between customers (users) and agents. Some PeopleSoft applications, such as an email response management system (ERMS) from PeopleSoft CRM, use PeopleSoft MultiChannel Framework or you can develop your own applications on the framework that is provided.

Supported Integration Technologies
EDI Manager, Outgoing Forms API and Open Query ODBC Driver and API.

Workflow Technology
Workflow capabilities enable you to efficiently automate the flow of information throughout your enterprise, crossing both application and functional boundaries. PeopleSoft Workflow Technology consists of a powerful set of tools that enables you to automate time-consuming business processes and deliver the right information to the right people at the right time. You can merge the activities of multiple users into flexible business processes to increase efficiency, cut costs, and keep up with rapidly changing customer and competitive challenges.
